Mechanized & Orbital TIG

Aristo® MechTig C2002i

Orbital welding power source

- Mechanized TIG welding increases productivity and reduces the welding costs.
- The Aristo® MechTig C2002i can control two motors; the travelling motor and the wire feed motor.
- Aristo® MechTig C2002i is built on a modular system and have a built-in cooling unit, which gives flexibility when adapting to customer requirements.
- The design of Aristo® C2002i is robust to withstand the wear and tear of many years of daily use in industrial environments.
- User friendly.
- 10" colour monitor.
- Graphical interface.
- Program library and auto generation of programs.

Open circuit voltage, V	92
Dimensions LxWxH, mm (in.)	470x479x472 (18.5x18.9x18.6)
Weight, kg (lbs.)	30 (66)
Enclosure class	IP 23

Aristo® MechControl 2 and 4

Orbital welding control boxes

- The Aristo® MechControl 2 can control two motors; for travelling and wire feed.
- The Aristo® MechControl 4 can control four motors; for travelling, wire feed, Arc Voltage Control (AVC) and weaving.
- The design of Aristo® MechControl 2 and 4 is robust to withstand the wear and tear of many years of daily use in industrial environments.
- User friendly.
- 10" colour monitor.
- Graphical interface.
- Program library and auto generation of programs.

Aristo® MechTig 3000i and 4000iw

Robust and powerful orbital welding power sources

- The power sources are optimised to operate together with Mech Control 2 and 4.
- The control and communication CAN-bus system means less cables, which in turn increases operational reliability.
- The power sources are compact and sturdy. Aristo® MechTig 3000i have a separate cooling unit and Aristo® MechTig 4000iw have a built-in water cooling unit, both are equipped with ELP.
- The patented ESAB LogicPump ELP automatically starts the cooling water pump in the machine when a water cooled tool is connected to the MechControl. This eliminates the risk of overheating the tool. When a self-cooled tool is used, the pump is automatically shut off giving lower noise and longer lifetime for the cooling pump.
- Connection cables up to 8 metres provide a working range of up to 16 metres to suit all your individual needs.

Aristo® MechTig 3000i

A21 PRB and PRC Tube-to-tube TIG welding tools

Small, flexible and lightweight

- Available in three sizes for tubes with outer diameters of 17 to 170 mm (0.67-6.7 inch)
- The PRB tools are available as water-cooled or air-cooled. They offer benefits in a number of application areas for welding stainless tubes in the food industry, process industry as well as heavy-duty engineering such as the energy and power industries.
- The PRC tools are water-cooled. They are available in two configurations with arc length control or with arc length control and weave control of the arc.
- The PRB tools can be used together with ESAB's power source MechTig C2002i or MechTig 4000iw/MechTig 3000i combined with MechControl 2 or 4.
- The PRC tools can be used together with ESAB's power source MedTig 4000iw/MechTig 3000i combined with MechControl 2 or 4.

A21 PRH Enclosed Tube TIG welding head

- Designed for welding thin-walled, stainless steel tubes to provide maximum gas shielding around the tube.
- Rotating part and tungsten electrodes are enclosed in a gas chamber formed by the outer casing, which also constitutes the clamping arrangement for the tube-to-tube to be welded.
- Water-cooled and available in three sizes to weld tubes between 3-76.2 mm (0.12-3 inch).
- Equipped with encoder motors for precise positioning of each sector when welding with different sets of parameters.
- Includes 8 m (26 ft.) connection cable.
- For use with ESAB's orbital TIG power source Aristo® MechTig C2002i or Aristo® MechTig 4000i combined with control box Aristo® MechControl 2 or 4.

A21 PRD Orbital Tube and Pipe TIG welding head

The ultimate tube welder

A21 PRD 160

- Designed for pipes with an outer diameter of 160 mm (6 inch) or more.
- Carriage travels around the pipe on a rack adapted to match the diameter of the pipe.
- Basic model for thin-walled pipes includes one motor for travel.
- Options for thick walled pipes include wire feed, arc voltage control (AVC) and weaving modules.
- For use with ESAB's orbital TIG power source Aristo® Mech Tig C2002i or MechTig 4000iw combined with MechControl 2 or MechControl 4.

A22 POC 12-60 Tube-to-Tube Sheet TIG welding head

Exact centering

- Precision-built, robust, versatile welding head for all types of tube-to-tube sheet welding.
- Working range of 12-60 mm (0.5-2.4 inch) outer diameter.
- High centering accuracy.
- Patented centering mandrels area available for inner tube diameters from 9.9 mm (0.38 inch)
- Water-cooled and capable of pulsing at 200A, 60% duty cycle.
- For use with Aristo® MechTig C2002i or MechTig 4000iw/ MechTig 3000i combined with MechControl 2 or 4.

A25 Mechanized TIG Modular Component System

The key to mechanization of your TIG welding

- Modular components can be easily combined to create customized solutions for specific welding requirements.
- TIG Narrow Gap method can be used together with A25 system for extremely small joint angle and subsequent low joint volume.
- Choose between different models with arc voltage control (AVC), weaving slides, manual horizontal and vertical slide, floating slides, circular slides, wire feeder and BTE 250M or BTE 500M torch.
- ESAB's well-proven power source Aristo® MechTig 4000iw/ MechTig 3000i combined with control box MechControl 4 can be used for control of functions like AVC, weaving, wire feed, rotation and other welding parameters.
- The power source Aristo® MechTig 4000iw/MechTig 3000i combined with MechControl 2 are used for control of functions like wire feed, rotation and other welding parameters.

MEI 10 and MEI 21 Wire Feed Units

MEI 21 Wire feed unit

- Four wire rollers for orbital TIG welding.
- Eliminates the need for a wire feed unit and wire spool mounted on the welding head.
- Use with 5 kg (11 lbs.) wire spools.
- For wire diameters of 0.6-0.8 mm (0.023-0.031 inch).
- Includes wire hose.

Wire feed unit MEI 10

MEI 10 Wire feed unit

- Developed for mounting PRB 17-170 tools (PRC 17-49 only with AVC).
- PRB tools with MEI 10 can be used with power source Aristo® MechTig C2002i or MechTig 4000iw combined with MechControl 2 or 4.
- PRC tools with MEI 10 can be used with power source Aristo® MechTig 4000iw combined with MechControl 4.
- Ideal for aluminium welding with short wire feed distance from the reel to the molten pool.
- Also use for mild steel and stainless steel.
- For wire diameters of 0.8-1.0 mm (0.030-0.040 inch) for aluminium, 0.8 mm (0.030 inch) for steel.
- Motor equipped with pulse generator for precise wire feed speed adjustment.

Controllers & Power Sources

A2-A6 Process Controller PEK

For use with ESAB CAN-controlled power sources and motors

- For use with ESAB automatic power sources LAF 631/1001/1251/1601 and TAF 801/1251.
- CAN-bus system for data transfer.
- Prepared for submerged arc welding (SAW), gas metal arc welding (GMAW) and arc gouging.
- User-friendly clear text menus.
- Selectable welding process.
- Memory for 255 parameter sets.
- Constant current or constant wire speed.
- Encoder controlled motors for top performance motion control.
- USB port for data back-up and transfer.
- Used welding parameters can be stored directly on a USB memory drive.
- Documentation of used welding parameters on PC or through LAN with WeldPoint™.
- Five Soft Keys can be configured according to operator preferences.

Speed control	feedback from pulse encoder
Welding speed, m/min (ipm)	0.1-2.0 (4-79) depending on travel carriage
Max. manual travel speed, m/min (ipm)	2.0 (79)
Consumable wire feed speed, m/min (ipm)	0.3-25 (12-984) depending on wire feed unit
Valve output	1 pc, 42 V AC, 0.5A
Inputs	for connection of sensors or limit switches
Connection to power source	Burndy contact 12-poles
Max ambient temperature, °C (°F)	45 (113)
Min ambient temperature, °C (°F)	-15 (59)
Relative humidity (of air)	98%
Dimensions, LxWxH, mm (in.)	246x235x273 (7x9.25x11)
Weight, kg (lbs)	6.6 (14.5)
Enclosure class	IP23
Standards	EN60974-1, EN60974-10

A2 Process Controller PEI

For use with ESAB power sources and motors

- Control system for A2 tractors and A2 welding heads
- Analogue type that can control most brands of power supplies.
- Suitable for submerged arc welding (SAW) or gas metal arc welding (GMAW)
- Travel speed, voltage and wire feed speed can be adjusted by simply turning the knobs - actual data is shown on digital displays during welding.
- Change welding direction using switch on front panel.
- Choice of scratch start or direct start methods.
- Adjustable burn-back time.

Power sources LAF 631, 1001, 1251 and 1601

DC power sources for submerged-arc welding (SAW) or gas metal arc welding (GMAW)

- Three-phase, fan-cooled DC welding power sources designed for high productivity automated submerged-arc welding (SAW) or high productivity gas metal arc welding (GMAW).
- Used in combination with ESAB's A2-A6 equipment range and the A2-A6 Process Controllers (PEK or PEI).
- Good arc stability at both high and low arc voltages.
- Adjust and monitor the welding parameters on the power source from the front panel of the process controller (PEK or PEI).
- Welding current range can be extended by connecting two power sources in parallel for the most demanding applications.
- Power source prepared for communication using most standard protocols like TCP/IP (LAN), CAN or even straight communication with a PLC. Optional communication modules might be needed depending on types of used protocol.
- Ideal for SAW applications such as wind tower components, nuclear power vessels, boilers and in the ship building industry.
- Ideal for GMAW applications such as welding the root pass in heavy pipe production.

LAF 631 in combination with MechTrac and GMH

These welding power sources comply with the requirements of EN 60974-1 and IEC 974-1.

S This symbol indicates that the welding power source may be used in areas with an increased electrical hazard, e.g. areas where the electrical hazard is increased due to damp and/or the proximity to earthed metal objects.

Power sources TAF 801 and 1251

Square wave AC power sources for submerged arc welding (SAW)

- Square wave AC power sources that convert the secondary voltage from a sinus wave via a thyristor controlled rectifier bridge to a square wave arc voltage with excellent strike characteristics and good welding properties.
- Capacity for continuous welding
- Pre-setting of arc voltage.
- Reliable square wave striking.
- Arc voltage or current feed back.
- Optimized open circuit voltage.
- Compensation of mains supply fluctuation.
- Voltage drop compensation for long welding cables.
- High power factor ensuring low power consumption.
- Designed and built for convenient servicing.
- Safety control voltage 42V.
- Prepared for Scott connection of two power sources.
- Used in combination with ESAB's A2-A6 equipment range and the A2-A6 Process Controllers (PEK or PEI).
- Power source prepared for communication using most standard protocols like TCP/IP (LAN), CAN or even straight communication with a PLC. Optional communication modules might be needed depending on types of used protocol.

Power source Aristo® 1000 AC/DC SAW

AC/DC inverter power source for efficient submerged arc welding

- Based on unique and patent pending technologies to deliver the best welding performance with the lowest power consumption.
- Designed for use with the digital PEK controller and the robust A2/A6 feeder units.
- A global inverter - connect to a three phase mains supply from 380 to 575 V, 50 or 60 Hz.
- Change between DC and AC "on the fly". Minimize downtime and weld defects by the push of a button with the patent pending "on the fly" function.
- Long welding cables. The patent pending Cable Boost™ technology stores energy and instantly delivers up to 450% additional energy when required. Cable Boost extends the maximum usable weld cable length with more than a factor two, without compromising the weld result.
- Cable Boost™ is also an energy saver. The inductive energy generated in the welding cables is re-used in the welding process instead of being wasted as heat and power losses.
- Designed for uninterrupted welding production. There are no connectors or cables at any exposed positions. All cables are connected behind a door in the front of the machine. Easily accessible for service and well protected against damage.

Welding Tractors

Railtrac 1000

Multi-purpose system for welding and cutting

- Ideal for a wide variety automated gas metal arc welding (GMAW) applications.
- Made from aluminium and steel parts to withstand harsh environments.
- Ideal for horizontal to horizontal and vertical (up only) welding.
- Can be customized with a wide range of accessories.
- New joint system allows for both stiff and flexible rail applications.
- Straightforward, well designed programming unit with up to 5 different programs.
- Standard software offers programmable interval welding and backfill function.
- Operator can control machine motions with hand held remote without lifting welding visor.
- Remote Control features: start and stop, shift program, weaving width, zero line displacement and many more.
- Adjust the welding current and voltage during welding with the two potentiometers on the remote control (when using ESAB equipment).
- Remote control only available on FW1000 and FWR1000 models.

Railtrac 1000

System configuration

Railtrac F1000 Flexi

A mechanised system with a flexible combi-rail, suitable for both inside and outside welding and cutting along sharp curves as well as straight surfaces. This model is also suitable for thermal cutting.

Railtrac FR1000 Flexi Return

Railtrac FR1000 has the combi-rail and facilities for movable start and stop for automatic return for any length. This system is ideal for use in fixed installations or where a weld is repeated over and over again.

Railtrac FW1000 Flexi Weaver

This version has a flexible combi-rail and a weaver for weaving in many different patterns. It is also equipped with a remote-controlled unit with a user-friendly design.

Railtrac FWR1000 Flexi Weaver Return

Like the Flexi Weaver, this system has a weaving unit, but it also has adjustable start, stop and return facilities. Equipped with a remote control unit with a unique design, this is a very advanced solution for a number of applications.

Railtrac Orbital W

The machine to automate your tube welding

The Railtrac Orbital W is a superb alternative if you wish to automate your tube welding. It is ideal for use with ESAB's semi-automatic power sources and feed units.

The Railtrac Orbital W is a small compact motor powered tractor. A standard ESAB welding torch can be attached quickly. Two motors guarantee an even, stable movement on the rail.

The control box allows you to control the following parameters and store 5 different welding programs:

- Start and stop
- Shift program
- Travel or welding direction
- Travel or welding speed
- Weaving width
- Zero line displacement
- Welding current (wire feed speed)
- Welding voltage
- Backfill function

Railtrac BV/BVR 1000

Programmable equipment for hardfacing and repair of rail profiles

- Light weight makes it quick and easy to remove the aluminium travel beam from rail or crossing and simple to restore to its original position on the work piece.
- It can be used with a number of different power sources and wire feeder combinations.
- Precise adjustments of the weaving pattern, travel speed and zero line can all be achieved during welding.
- Welding parameters are adjustable from the remote control.
- CE and EMC approved.
- IP 23 enclosure class makes it suitable for use out-doors. Control voltage level of 42V AC is safe for use anywhere.

Zero-line shift, mm (in.)	25 / ±12.5 (1.0 / ±0.5)
Programmable edge length (L), cm (in.)	6-99 (2.4-39)
Number of programs	BV: 4, BVR: 6
Enclosure class	IP23

Tramtrac™ II

A cost-efficient and flexible solution for the repair of embedded city tramway rails.

Tramtrac™ II is ESAB's latest equipment for the repair of embedded grooved city tramway rails. Using the FCAW process with self-shielded wires, instead of the conventional SAW process, provides a number of advantages in terms of ease of use and cost-efficiency.

- The FCAW process makes Tramtrac™ II a small and ultra light-weight solution.
- Easy to store and move around from site to site.
- The tractor can be hand-carried and is easily installed and removed on and off the rail, allowing trams to pass within a controlled safety situation.

Miggytrac 1001

The perfect complement to your GMAW power source

- Small, compact, motorized tractor.
- Easy to attach to ESAB welding torch.
- The tractor is held in the correct position on the workpiece with a magnet, even if the workpiece is bent or angled.
- Remote controlled travel.
- Start/stop function from the remote control panel.
- Travel speed settings of 150-1200 mm/min (6-47 ipm), wire feed speed and voltage all functions of the remote control.
- Significantly increased welding speed, especially when using cored wire.

Miggytrac 2000

The perfect complement to your GMAW power source

- Ideal for long welds eliminating stressful welding positions for the welder.
- The tractor is held in the correct position on the workpiece with a magnet, even if the workpiece is bent or angled.
- Guide wheels adjust to allow the unit to drive itself against the workpiece.
- Program for intermittent welding.
- Set length of weld and distance between welds from 1-99 cm (0.4-39 in.)
- High-speed travel between welds - 250 cm/min (98 ipm) - for increased efficiency.
- Backfill function for crater filling at the end of the weld.
- Adjust the welding current and voltage during welding with the two potentiometers on the control panel (when using ESAB equipment).

Miggytrac 3000

The complete small welding automat for Gas Metal Arc Welding

- Small, compact, motorized tractor with integrated wire feed and water-cooled welding torch designed for horizontal mechanized MIG welding of plates and beams
- Four-wheel drive carriage
- Carriage can travel diagonally towards the flange or stiffener to be welded.
- Program for intermittent welding.
- Carriage motion and wire feed controlled separately.
- Set weld length and distance between welds from 1-99 cm (0.4-39 in.)
- Distance between beads run at transport speed of 250 cm/min (98 ipm) for optimal efficiency.
- Program wire feed speed, time for gas pre-flow, gas post-flow and burnback.

A2 Multitrac with A2 process controller PEI

The universal welding tractor for better welding economy

- Can be connected to most analogue, DC power supplies.
- Compact and efficient design allows for easy movement between workpieces.
- Self-propelled, four-wheel drive for stable, accurate and constant operation.
- A2 Process Controller PEI allows simple setting of travel speed, voltage and wire feed speed.
- Heavy-duty feed unit ensures an even and stable wire feed, for top quality, homogenous welding.
- Horizontal, vertical and rotary slides allow for quick adjustment of the nozzle into various positions.
- Reliable mechanical components, even under harsh working conditions.
- Easy to use control equipment with different start methods; direct start or scratch start.
- Wide range of accessories available.

A2 Multitrac with A2/A6 process controller PEK

The universal welding tractor for Submerged-arc Welding (SAW) and Gas Metal Arc Welding (GMAW)

- The A2 Multitrac with the A2/A6 process controller PEK is available for both the SAW and the GMAW method.
- If the SAW-version is chosen, the A2 Multitrac is capable of working equally well with either single or twin wire.
- The feed unit secures an even, stable wire-feed speed.
- Four-wheel drive ensures accurate travel speed.
- Digital control panel allows exact pre-set and control of welding parameters.
- The Multitrac is fully mobile and can easily be moved from one welding station to another. It can also be quickly set-up for different workpieces.
- Designed for use with LAF or TAF welding power sources.

A2 Tripletrac A2TF

The superb welding tractor for internal circumferential welding

- For increased productivity and quality.
- Ideal for internal circumferential welding of large cylindrical objects that are rotating on a turning roll system.
- Heavy-duty feed unit secures even and stable wire feed for top quality, homogenous welds.
- Delivered with either the digital A2-A6 PEK or the analogue A2 PEI process controller.
- Unique steering system allows operator to simultaneously adjust the wheel and torch position for accurate and effortless seam tracking.
- Control equipment is easy to use and requires minimal training.
- Choose between start methods, burn-back times and other settings.

A6 Mastertrac A6TF (SAW)

For efficient Submerged-arc Welding

- Self-propelled, four-wheel drive automatic welding machine.
- Easy to move with quick set-up for different workpieces.
- Suitable for heavy production welding with capacity for up to 6 mm (0.24 inch) wire using 1500A direct or alternating current.
- Designed for use with LAF or TAF welding power sources.
- Three different designs:

Single: available with standard or high speed motor

Twin-Arc: with a simple add-on for the extra wire, you can convert an A6 Single Mastertrac into a highly productive automatic Twin-arc welder for fillet and butt welds without the use of an extra machine or power source.

Tandem: the high deposition rate using a multi-electrode system increases productivity substantially. By selecting different combinations of direct and alternating currents, the A6 Tandem Mastertrac can handle any type of welding work resulting in increased profitability.

- Weld mild steel and aluminium solid or cored wire by modifying an A6 Single Mastertrac with an easy conversion kit for Gas metal arc welding (GMAW).
- Pre-set and control of welding parameters with the A2-A6 Process Controller PEK - a digital control system with display menus; 255 different weld sets can be stored.

A6-DK

The portal welding machine

- Works with a single wire on each head.
- Each weld head is controlled by the A2-A6 PEK process controller and LAF (DC) or TAF (AC) power source.
- Ideal for simultaneous horizontal-vertical welding on both sides of a web or through panel.
- Straddles workpieces up to 800 mm (31 inch) tall and symmetrical profile widths of 400 mm (16 inch).
- Travels directly on a workpiece guided by a joint.
- Travel speed adjustable from 0.15-2.0 m/min (6-79 ipm).
- Store up to 10 l (2.6 gal.) of flux in the hopper.
- Each weld head is equipped with OPC flux recovery system.

A2S Mini Master

A multi-purpose automatic welding system

- Versatile welding system for single wire SAW, twin wire SAW or GMAW.
- Light-weight, compact design allows for greater flexibility.
- Modular design allows user to expand, integrate or modify the system quickly and easily.
- Uses A2-A6 PEK or A2 PEI process controller.
- Accurate, easy joint-tracking with manual or motorized slide system and manual PAV or automatic GMH joint tracking.
- The system attaches to any beam travelling carriage or Column & Boom system.

A6S Arc Master

Flexibility as standard

- Flexibility, reliability and superior performance capability
- Comprehensive component and module system make process customization easy.
- A6 VEC motor for reliable and consistent wire feed.
- Accurate, easy manual PAV or automatic GMH joint tracking with manual slides or joystick-controlled motor-operated cross slides.
- Capable of heavy-duty gas metal arc welding (GMAW), single/twin wire submerged arc welding (SAW), as well as strip cladding and Synergic Cold Wire (SCW) welding with optional accessories.
- Uses A2-A6 PEK process controller for fast, accurate pre-setting of all parameters before welding starts.
- Feedback system ensures high and consistent welding quality - saves time and material.
- The welding heads can be equipped with a standard wire feed unit (gear ratio 156:1) or with a high-speed wire feed unit (gear ratio 74:1).

A6 Component system Modularization

A6S and A6DS Tandem welding heads

For optimum productivity

- Suitable for heavy construction welding.
- Capable of welding DC/DC, DC/AC or AC/AC.
- Uses A2-A6 Process Controller PEK for quick and accurate programming of welding parameters for each torch.
- Feedback system gives high and consistent welding quality from start to finish, saving time and money.
- Versatile positioning through easy to use, complete slide assembly for welding torch position, distance stick-out and angle on both leading and trailing torches.
- Enhance productivity by adding optional equipment such as Twin Wire and Synergic Cold Wire systems.
- Available in two basic versions, A6S Tandem Master and A6DS Tandem Master with several configurations to match specific safety, quality and productivity requirements.
- Welding heads can be equipped with a standard wire feed unit (gear ratio 156:1) or with a high-speed wire feed unit (gear ratio 74:1).

A6S and A6DS Tandem welding heads

cont.

A6S Tandem Master

- Optimized for welding across multiple perpendicular axes and is key in the welding of cylindrical objects where both longitudinal and circumferential welding is required.
- Adjustable +90° interval turning bracket and cross slide.
- Automatic joint tracking keeps in track no matter which direction welding occurs.

A6DS Tandem Master

- Optimized for welding in multiple directions and is key in the automated welding of long weld joints such as beams and girders.
- Adjustable ±90° interval turning bracket and fixed cross slide.
- Automatic joint tracking in any direction when integrated to ESAB column and boom M-model systems; simply rotate the head 180° and weld in the reverse direction.

A6S Compact welding heads for internal welding

For excellent welding results

- For welding longitudinal and circumferential butt joints inside tubes.
- Three versions available:
 - A6S Compact 300 for internal welding of tubes down to 300 mm (12 inch) inside diameter.
 - A6S Compact 500 for internal welding of tubes down to 500 mm (20 inch) inside diameter.
 - A6S Compact 700 for internal welding of tubes down to 700 mm (27.5 inch) inside diameter.
- Equipped with reliable, VEC feed motor for superior weld performance.
- Supervise and adjust the head position via TV monitoring system - Optional.
- Use standard mini-cross slide assembly and PAV manual tracking system or GMH automatic joint tracking system to easily follow the joint - Optional.
- Add either the FFRS Basic/Super or FFRS 1200/3000 Flux Feed & Recovery System to optimize the welding process.

A6S SAW strip cladding head

For surfacing with high alloyed materials

- Used in combination with standard A6S Arc Master welding head.
- Provides an economical solution for surfacing with high alloyed materials such as stainless steel or nickel-based alloys.
- Choose a wider variety of parent materials and consumables.
- Stainless steel cladding is widely used in production of components where additional strength or corrosion resistance is required.
- Welding head can be fitted with electrode strips as wide as 30-100 mm (1.2-4.0 inch) and as thick as 0.5 mm (0.02 inch).

ESW - Electroslag welding - is a method of strip cladding, but differs from SAW strip cladding in that the arc is created between the electrode and the workpiece.

The welding flux that is put into the joint melts and a slag pool is produced, which then increases in depth.

When the temperature of the slag and its conductive capacity thereby increases, the arc is extinguished and the welding current is conducted via the molten slag where the necessary welding energy is produced through resistance.

This method can be used for joining thicknesses of 25 mm (1 in.) and above.

Contact ESAB for Options & Accessories and Technical Data for the ESW Welding Head.

Column & Booms

CaB Systems

Cost efficient and flexible weld mechanization

- Modular design concept allows total customization using standard components.
- Large selection of available components to integrate for a custom solution:
 - Any A2 or A6 weld head
 - A2-A6 Process Controller PEK with ESAB DC or AC power sources
 - ESAB turning rolls and positioners
 - ESAB flux feeding and recovery systems
 - Monitoring systems and cameras
 - Four basic station configurations, suitable for most standard applications.
- Three different sizes; 300, 460 and 600 (number refers to boom profile height (mm) which determines working range and load capability).
- Choose from stationary or mobile, rail-travelling carriage systems.
- Versatile to respond to any automated welding demand.

Standard CaB sizes

The three different sizes 300, 460 and 600 are the beam height dimensions of the boom in millimeters. Each boom size has a corresponding column. The different sizes are not only limited in where it can fit, but also how far the boom can extend and how much load that can be put on.

CaB 300S / 460S

Standard format - exceptional economy

- Conventional column and boom with a movable boom and the welding head mounted at the end of the boom.
- Standard mechanical performance, with cable support.
- Options like camera system, pulse encoder-regulated speed and flux control.
- The CaB 300S have a working range of 3 to 5 m (10 to 16.5 ft.) both vertically and horizontally.
- The CaB 460S have a working range of 5 to 7 m (16.5 to 23 ft.) both vertically and horizontally.

Basic Station 1 - Standard format

Conventional Column and boom, with a movable boom and welding head at boom end. Welding equipment can be positioned along four axes.

CaB Systems

Cont.

CaB 300M / 460M / 600M

Modular format - extended functionality

- A modular range of column and booms, available in three load sizes.
- Standard mechanical performance, including cable chains for the boom motions.
- The welding head is mounted at the front end of the boom.
- More than 20 options fully integrated, such as tandem welding, shift function, transport speed etc.
- Due to modularity and the fixed configuration possibilities the lead times for delivery can be kept at a minimum.

Basic Station 1 - Modular and Custom format

Conventional Column and boom, with a movable boom and welding head at boom end. Welding equipment can be positioned along four axes. Cable chains are included.

CaB 300C / 460C / 600C

Custom format - special capabilities

- A customized range of welding column and booms for different customer requirements and applications.
- Loading capacities and working strokes for utmost accessibility to the welding joints.
- Based on the modular CaB range, solutions to meet the most demanding request can be achieved.
- Welding methods as TIG, MIG and SAW cladding as well as Nar row Gap can be chosen on customized stations.

Basic Station 2 - Custom format

Conventional Column and boom, with a movable boom and welding head at boom end combined with a boom-carriage-mounted welding head (not CaB 300).

Basic Station 3 - Custom format

Side-boom manipulator with horizontally fixed boom, supporting one or two welding heads. This welding station, which offers flexible movement, is the basic unit for welding girders and profiles and for joining plates and sections.

Basic Station 4 - Custom format

Side-boom manipulator with double-track boom. Welding heads mounted on either side of the boom. The boom carriages can be individually controlled by the joint tracking systems, on separate tracks. Ideal for transversal double-fillet welding of stiffeners.

Cab 2200

For small and medium sized objects

- Designed for light duty.
- Smooth 360° lockable rotation.
- Linear guidings for smooth movement which makes it ideal for the gas metal arc welding (GMAW), gas tungsten arc welding (GTAW) and submerged arc welding (SAW) processes.
- Cable chain on column and boom.
- Movable carriage or fixed stand.
- IP 55 pendant control station using low voltage on the generous 10 m (33 ft.) cable.
- Anti-fall device and limit switches for all motions.
- Pay load of 70 kg (154 lbs.)

CaB 44, 55, 66 and 77

- Designed and robustly built to withstand rugged work environments.
- Smooth 360° lockable rotation.
- All vertical and horizontal guidings are precisely machined for smooth movement.
- Solid state inverter for variable speed of horizontal travel and travel carriage.
- Work gearbox for vertical travel via AC motor, complete with brake for added safety.
- High tensile roller chain used for vertical travel with the addition of a counter balance system with the column that provides smooth, effortless travel.
- IP 55 pendant control station using low voltage on the generous 10 m (33 ft.) cable.
- Anti-fall device and limit switches for all motions.
- Pay load of 420 kg (924 lbs.)

Telbo™ 6500 and Telbo™ 9500

Telescopic boom

- Save valuable workshop space with the unique 3-section telescope-like retraction of the boom, securing operator safety.
- Outstanding reach-out with heavy loading capacity to ensure superior productivity and weld quality.
- Ideal for internal/external circumferential welding of windtower applications.
- Flexible production, no matter if mixed sizes and plate thicknesses are to be welded - productive results are obvious.
- Loaded with 1000 kg (2204 lbs.) Flux BigBag and 1000 kg Wire EcoCoils, welding is continuously performed and costly dwell times are minimized.

Ordering information

For ordering information, please contact nearest ESAB representative.

Features

- PLC control system for synchronized boom motion
- Automatic "Wind Back" of wire during boom retraction
- Telescopic wire guides
- Remote controlled flux nozzle (option)
- Remote controlled height adjustm. of joint tracking sensor (option)
- Saving in factory-floor foot print
- Increased workshop safety
- Enables flexible production
- "Big Pack" handling concepts (option)
- Camera supervision system (option)

Applications

- Power generation, especially wind tower manufacturing lines.
- Pipeline, pipe mill contactors.
- General fabrication (small workshops with limited space).

Carriers & Gantries

Mechtrac 1730/2100/2500/3000

For mechanized gantry automation

- Fast and flexible way to increase productivity.
- Equipped with A2-A6 PEK process controller and A2 welding equipment for mechanized submerged arc welding (SAW) or gas metal arc welding (GMAW).
- Weld various profiles such as I-, T- or L-beams, straight columns or tapered columns.
- Available in four versions (width of gantry): 1730 mm (68 in.), 2100 mm (83 in.), 2500 mm (94 in.) or 3000 mm (118 in.).
- All versions have standard gantry leg height of 1500 mm (59 in.).
- Floor mounted rail delivered in standard lengths of 3 m (118 in.) - can be easily extended.
- Dual-drive motors are standard.
- Gantry can support a maximum weight of 220 kg (485 lbs.) - up to two A2 welding heads, complete with GMH joint tracking and OPC flux recovery systems.

Gantrac

Highly stabilized manipulation of welding torches with optimized welding results

- Rigid legs supported by encoder-controlled DC-driven bogie carriages as well as a cross beam to ensure uniform, stable welding speed.
- The gantry beam is equipped with guides and a rack on one or both sides for motorized welding carriages.
- The well-proven A6 welding heads are mounted on heavy duty slides with comprehensive working strokes to obtain good access to the workpieces.
- Incorporates the A2-A6 Process Controller PEK, equipped with GMH automatic joint tracking to control the vertical and horizontal axes.
- Submerged arc welding is the ideal method for the applications intended for this station.
- The flux handling equipment can be operated conveniently, without time-wasting interruptions. At the same time as flux consumption is reduced, the workplace is kept clean and free from flux spillage.
- The welding heads can be turned ± 180 degrees for welding in both X-directions as well as 90 degrees for welding in Y-direction across the beam.
- A large number of positioning axes permit flexible welding production.

Ordering information

For ordering information, please contact your nearest ESAB representative.

Walltrac

Minimal floor working area thanks to the single rail/wall support

- For production of various beam structures, such as I/H and box beams of tapered and non-symmetrical design, stiffener sections and the joining of plates and sections.
- Longitudinal and transverse welding procedures.
- Uses A6 welding heads and A2-A6 Process Controller PEK.
- Automatic joint tracking GMH controls the vertical and horizontal axes, i.e. the slides and the carriages, to safeguard the superior weld quality.
- A large number of positioning axes permit flexible welding production.

Accessory Components

Beam Travelling Carriage

To be used with ESAB A2 and A6 welding heads

- Ideal solution for submerged arc welding (SAW) or gas metal arc welding (GMAW) applications requiring beam mounted carriage.
- Can be fitted with any A2 or A6 welding head.
- For longitudinal welding or welding of circumferential workpieces.
- Place the carriage on either a standard I-beam IPE 300 or specially machined I-beam (contact ESAB for details).
- Fast and easy pre-programming of travel motion and welding parameters using the A2-A6 process controller PEK.

Servo Slide

Motorized slide for linear motion

- Heavy duty capacity with high precision slide for accurate and rapid joint tracking and positioning.
- Can be installed in vertical or horizontal positions - setting lengths up to 1030 mm (41 in.) with a central point of attachment.
- Operates jointly with A2 or A6 components.
- Slides available from 60 mm (2.4 in.) to 1030 mm (41 in.) working range.
- Permissible load of 1500 N (337 lbf/ft.) in any mounting position.
- Maximum torque for vertical unit is 400 Nm (3540 lbf/in.); maximum torque for horizontal unit is 280 Nm (2480 lbf/in.).

PAV and GMH

Joint Positioning and Tracking systems

- Simple and easy to use.
- Adapt for use with almost any type of welding joint.
- The PAV system is for manual joint tracking and the GMH system is for automatic joint tracking.
- The PAV and GMH work equally well with ESAB A2 or A6 welding systems.
- Motorized servo slides guarantee a reliable and accurate joint tracking.
- Both the PAV and GMH systems are available in three versions; with control panel on the front, with remote control or without control panel suitable for integration into customized solutions.
- The GMH automatic joint tracking system is designed for use in fillet and butt joints using sensor fingers.
- GMH compensates for irregularities in weld joint, tracks simple geometric shapes and avoids parallax problems.

AVPS

Automatic Laser Tracking Unit

- The AVPS (Active Vision Process Supervision) laser tracking system provides precise seam tracking to significantly increase productivity and minimize weld defects.
- The AVPS provides a very simple, operator friendly and affordable system, while retaining the precision and flexibility available with an advanced laser vision system.
- It is especially suited for 3D hard automation applications, such as subarc.
- The AVPS is operating using standard ESAB pendant and joystick control.
- Minimal operator training is required. The operator simply selects the pre-programmed joint profile (groove, fillet etc.), brings the head into position and starts tracking.
- The cost of an AVPS upgrade can easily be justified by defect elimination and higher speeds.
- The AVPS can be installed on any new or retrofit GMD or GMH standard system. It can run in automatic, semi automatic and manual modes.
- Robust design fit for SAW environment.
- Easy retrofit on existing GMD/GMH installations.
- No mechanical adjustments needed.
- Easy to learn and operate.
- Vertical and horizontal seam tracking for V- and butt grooves as well as many other joint types.
- Joint type selection via control pendant.
- The delivery includes Laser vision camera, control unit, Weldcom HMI software, replacement protective camera lenses (10 pcs), cable kit complete for GMD/GMH including ESAB probe cable (3 m), laser camera cable (30 m), control unit to GMD/GMH (3 m).

OPC Basic & Super

Sturdy compact flux recovery systems

- Robust and compact design.
- Easy to operate and practically maintenance-free.
- Integrated system for maximum productivity - lower investment and service costs.
- Adapts to any A2 or A6 welding system - tractor or stationary.
- Uses only compressed air - safe and inexpensive.
- Can be integrated into complete FFRS flux feeding and recovery system.
- Three filter types; filter bag for A2 applications, cyclone filter with filter bag for most A6 applications and Tedak filter for heavy-duty applications.
- OPC system includes; ejector, cyclone, filter with attachment hardware, securing strap, suction hose and four suction nozzles (for butt welds, normal and large; fillet welds, left and right).

OPC Basic Flux Recovery System

- Works on ejector principle using compressed air
- Cyclone separator, on top of flux hopper, efficiently separates dust from recovered flux.
- Slag is separated and flux is returned to hopper.

OPC Super Flux Recovery System

- Similar to Basic System but with stronger ejector and cyclone - provides better suction.
- Can also be used with pre-heated flux.

FFRS Flux Feed and Recovery Systems

Efficient flux handling for cost-effective welding

- Ideal for continuous and high capacity welding
- Minimum manual flux handling.
- Reduced flux consumption for better welding economy.
- Fewer weld stops for increased efficiency.
- Efficient filtration of used air.
- Flux feeds from a 75 l (20 gal.) capacity TPC-75 pressurized flux tank to the ESAB flux hopper of your choice; 6 l or 10 l (1.6 gal. or 2.6 gal.)
- Flux feed inlet options; straight or bent.

FFRS Super

- Built on OPC Super modules
- **Super** - for increased flux and heat conditions.
- Based on ejector vacuum principle.

FFRS 1200 & 3000

- Based upon an electrical suction unit creating vacuum.
- For use when extra high recovery force is required and for compact welding heads.
- Flux dust separated automatically in a pre-separator.

CRE 30 & CRE 60 Air Drying Units

For use with ESAB flux handling systems

- Designed for use with any flux handling system.
- The system is based on the absorption principle - reduces the risk of hydrogen cracking in weld metal by ensuring flux remains dry.
- Built-in monitor - warns if the programmed humidity limit is exceeded.
- Reduces condensation - less corrosion and malfunctions.
- Simple system monitoring - manometer on pressurized dryer bottles with easy-to read dew point indicator.

Rotating Ground Couplings

- For a good connection to the workpiece to obtain optimal welding performance.
- For rotating workpieces, a ground connection with a rotatable coupling is the safest choice.
- To attach the coupling to the workpiece, special clamps are available, see "Ground Clamps" below.

Rotating ground coupling NKK

Ordering information

NKK 600, max. 600A, 2.2 kg (4.8 lbs.)	0700 004 007
NKK 800, max. 800A, 2.7 kg (5.9 lbs.)	0700 004 001
NKK 1200, max 1200A, 4.0 kg (8.8 lbs.)	0700 004 002
NKK 2000, max 2000A, 7.3 kg (16 lbs.)	0700 004 003

Ground Clamps for Rotating Workpieces

- K2 or PZ3 ground clamps can be mounted directly onto the rotatable ground coupling to create good contact between the workpiece and the return cable.
- Return clamps can also be used together with the GA 800 handle connection to form a complete ground clamp to handle high current welding on non-rotating workpieces.

Camera Systems

for submerged arc welding (SAW) and open arc welding

- Together with a laser or pilot lamp, control the welding process from a convenient location.
- The system consists of a purposeful designed camera with built-in crosshair generator to provide a continuous and distinct joint scanning.
- In combination with the 15 inch flat screen, it becomes a unit for excellent control and joint supervision.
- Upon welding, the GMAW camera switches over to viewing the weld pool, facilitating the supervision of the process.
- Optional overview camera will reproduce a picture of the welded joint to get an immediate inspection of the welding quality.

OCE-2H Cooling unit

Compact and efficient

- Can be used for gas metal arc welding (GMAW) as well as for tungsten arc welding (GTAW).
- Both for manual and automatic welding.
- Flow guard as option.
- Designed for use together with water-cooled welding equipment, manual or automatic.
- The water tank and pump are manufactured of corrosion resistant material. A flow guard is available as optional equipment for control of the water flow down to about 1 l/min (0.26 gal.)

FIR 35, 75 and 100

Heavy duty Roller Beds for growing line production

- Designed and robustly built to withstand rugged work environments.
- This unit is part of a growing line, ideal for wind tower production.
- FIR has four independently adjustable rollers to align the workpieces (cans) with each other and two cross rollers to lift up the section for conveying out the workpiece.

Ideal for:

- Wind tower fabrication
- Vessels
- Pipemills

FIT 30, 60 and 100

Conventional idler Roller Beds with built-in hydraulic height adjustment

- Designed and robustly built to withstand rugged work environments.
- This unit can be used in one for aligning several cans or used as part of a growing line, ideal for wind tower production.
- Two independently adjusted rollers to align the workpieces (cans) with each other.
- Delivered with or without rail bogie.

Ideal for:

- Wind tower fabrication
- Vessels
- Pipemills

SD 5-120 and SI 5-120 Self-aligning Roller Beds

- Robust design with durable rollers.
- Gritblasted steelwork with polyurethane finished coating to endure the abrasive environment of offshore and marine industries.
- Oversized bearings.
- Specially formulated high-load polyurethane tire design for high wear resistance.
- Cast steel gearbox with double worm gear arrangement for smooth operation and minimum backlash.
- Solid state inverter for precise speed control.
- Motorized and idler rail bogie versions.
- Electrical clutch

Ideal for:

- Wind tower fabrication
- Offshore and shipyards
- Pressure vessels
- Thinwall vessels / Pipes

FUB 30 and FUB 60

Fit-up beds

- Designed and robustly built to withstand rugged work environments
- Fastest system to assemble 1 + 1 sections.
- One FUB set consists of one power and one idler roller bed 30T, four independently adjustable rollers to align the two sections with each other.
- The roller bed and rollers are all mounted on one main frame.
- Tires of type Polyurethane 20.5 x 7 inch.

Ideal for:

- Wind tower fabrication
- Vessels
- Pipemills

RT3 - RT35

Two-axis Positioner for rotating and tilting workpieces

- Continuously (stepless) adjustable speed.
- Low voltage (24) remote control unit for all functions.
- 2-axis: tilting and rotation.
- Inverter-controlled rotation speed.
- All drives are equipped with AC motors which require less maintenance, no carbon-brush to change.
- Mechanically and electrically designed for easier maintenance with few spare parts.

Ideal for:

- Pipe shops
- Vessels
- Cladding of dish ends
- Fuel tanks

TAP 1T-STD / TAP 3T-STD and TAP 1T-HD / TAP 3T-HD

Three-axis Positioner for small objects

- Height, angle and speed are continuously (stepless)adjustable.
- Low voltage (24V) remote control unit for all functions.
- 3-axis: height, tilting angle and rotation.
- Inverter-controlled rotation speed.
- All drives are equipped with AC motors which require less maintenance, no carbon-brush to change.
- The hydraulics for height and tilt adjustment are equipped with built-in safety valves preventing hose failure.
- Mechanically and electrically designed to be more compact and with fewer components for easier maintenance and fewer spare parts.
- Compared with TAP-STD, the TAP-HD have higher rotation torque, smaller backlash on table top and are more stable on front back swaying.

Ideal for:

- Pipe shops
- Vessels
- Cladding of dish ends
- Fuel tanks

PR7/10 and IR7

Pipe Spool Rotator & Idler

- PR7/10 is used in Pipe Spool applications.
- The PR7/10 has robust design, gritblasted steelwork with Polyurethane finished coating to endure the abrasive environment.
- Working area Ø 50-920 mm (1.97-36.2 inch)
- Rotation speed 75-750 mm (2.95-29.5 inch)

Ideal for:

- Welding of pipes
- Prefabrication/welding of pipe systems
- Welding of curved pipes, angle tees

Tank welder AGW1 and AGW2

Single-side and double-side

- A series of self-propelled 3 o'clock welding equipment, primarily developed for on-site erection of large storage tanks, silos, blast furnaces and similar cylindrical objects.
- Available as a single-side version and a double-side version.
- Designed to travel on the top edge of the tank shell.
- As there are different ways of building tanks, one machine in the series is designed to travel on a rail which is temporarily fixed to the shell or on a stand-alone ring outside the shell.
- The operator of each machine (if a double-side version) rides in a cabin, where he supervises and controls the welding process with the control panel within easy reach.
- The cabin, whose floor level under the carriage is variable to suit the height of the plate, is built as a cage to give the operator(s) maximum safety and comfort.
- For weather protection the cage can be covered by curtains.
- The cabin of a double-side machine is equipped with step ladders and a joining bridge at the top to facilitate for the operators to climb onboard. The bridge also has guard rails for the safety of the operators.

Special Applications

Friction Stir Welding

Quality in depth

- The Friction Stir Welding (FSW) method is based on the principle of obtaining a sufficiently high temperature and pressure to join two components together by using a rotating tool, which under high pressure, moves along the joint and thereby creates a weld.
- FSW is ideal for joining straight profiles and flat plates from 1.2 to 130 mm (0.045 - 1.18 inch) with full penetration.
- Butt, lap and corner joints can be welded.

Suitable application areas

- Shipbuilding / Offshore platforms
- Aerospace industry
- Railway wagons, trams, underground train carriages
- Automotive industry
- Production of electric motors
- Defence industry
- Cooling elements
- Basically all aluminium, copper and magnesium alloys can be Friction Stir welded with high quality and speed.

Key benefits

- Minimal distortion and shrinkage
- No joint preparation - degreasing only
- No grinding, polishing or straightening
- No repair welding
- Reduced weight (40% less than GMAW)
- High joint-gap tolerance
- Consistent weld quality
- Increased tensile strength
- Outstanding fatigue properties
- No fumes, sparks or spatter
- Low noise level
- Simple operation (HMI)
- Improved repeatability

SuperStir™ Friction Stir Welding System

The ESAB SuperStir™ range is purpose-built for high-volume production of large aluminium panels, girders and trusses. The large custom-designed units offer a safe, clean and simple welding process that can be fully automated, dramatically reducing production costs.

ESAB SuperStir™ FSW technology is applied across the entire industrial spectrum, from shipping, offshore, construction and transportation to defence and aerospace.

Friction Stir Welding

Cont.

LEGIO™ Friction Stir Welding System

- The modular system makes it possible to assemble welding stations to suit the most varied Friction Stir welding applications.
- The LEGIO™ system consists of 5 basic designs in a series of seven sizes, covering a welding depth of 1.2 to 65 mm (0.045 to 2.4 in.)
- These basic types can be supplemented with different types of equipment to suit the most varied production needs with maximum flexibility to any production line.
- The larger S- and the U-models are designed to be easily integrated with larger fixtures, rotary units and exchangeable clamping systems.
- For the production of smaller workpieces, the UT- and the ST-model are the most suitable. They have tables prepared with a hole pattern, where fixtures can be attached.

Rosio™ Friction Stir Welding Robot

- Designed for complex joints.
- The latest IRC5 control system, featuring embedded force control, ensures high accuracy in-contact motion.
- The upgraded motion software permits linear welding in arbitrary patterns, as well as circular and square paths.
- Additional functionalities to support customized path programming and spindle operation, permit advanced welding, even with limited programming skills.
- A user-friendly HMI extends the IRC5 interface, providing full operator feedback via a Flex Pendant.

Hybrio™ - Hybrid Laser Welding

Lighting the way

- ESAB's Hybrio™ hybrid laser welding technology combines the deep weld penetration and low heat input associated with laser welding with the excellent weld properties and superior gap tolerance of gas metal arc welding (GMAW).
- A radically new welding alternative, it produces extremely narrow and deep welds at very high travel speeds. In a single pass, the Hybrio™ process can often achieve what might require multiple weld passes using a conventional fusion welding process.
- Heat input to the part is reduced, as is the associated weld shrinkage and distortion that can make post-welding geometry unpredictable - and costly to repair.
- Using GMAW in combination with a laser, the Hybrio™ process solves laser-only welding's limitations, concerning its ability to produce acceptable welds in joints with less than perfect fit-up between parts. This enables a widened, more robust process envelope by a factor of three compared to a conventional laser-only process.
- GMAW also allows users to add filler metal to adjust the weld's metallurgical properties and create beads and fillets, while the slower cooling rate reduces hardness. These features are especially beneficial when joining high performance carbon and stainless steels.
- ESAB's exclusive adaptive closed-loop control system detects joint fit-up conditions and changes the process parameters in real-time to achieve a constant weld profile. This broadens the process window by a further 5 times over non-adaptive control.

Graphic illustrating differences between GMAW, Laser and Hybrid Laser Welding weld profiles

Sales Literature

XA00153320

The Hybrio™ Value Proposition:

- Operating costs reduced by 50-80%.
- Productivity improved by 300-1000%.
- Heat input and distortion reduced by 80-90%.
- Reduced weld repair rates.
- Reduced labour content through fully automated operation.
- Reduced operator skill requirement due to easy, PC-machine controller.
- Lower downstream assembly, welding and finishing costs, through reduced part distortion.
- Higher overall plant throughput and revenue generation.
- Feasibility of new, lighter, stiffer and simpler product design and construction methods.
- Full backing and support of ESAB's process experts and service professionals, with extended warranty and service agreements.

Hybrio™ - Hybrid Laser Welding

Cont.

Hybrio™ Flex

The Hybrio™ Flex flexible hybrid laser welding cell is based upon a modular, six-axis motion system platform that can be scaled to cover a large range of working envelopes up to 4m x 20 m and longer. Additionally, this system can be configured to cover a range of Z-axis depths from 1 m to 3 m (3 to 10 ft.). This gives the user the flexibility to use the Hybrio™ Flex system for large variety of product geometries and weld joint configurations.

Hybrio™ Beam

The Hybrio™ Beam hybrid laser beam welding system is based upon ESAB's robust submerged-arc beam welding systems that can be found in plants around the world. These systems come in horizontal and vertical configurations and are designed to center and feed web and flange parts through a fixed welding station. Components are aligned and pressed together ensuring excellent joint conditions at the point of welding. Equipped with the Hybrio™ process, these systems can out-produce traditional beam welding equipment by a factor of three to ten times depending upon the web thickness.

Hybrio™ Seam

Hybrio™ Seam hybrid laser seam welding systems cover a range of raw sheet and plate thicknesses and sizes from small sheet and coil joining systems to large panel line plate welding machines. These systems are designed to press and clamp sheet or plate joints into position as the Hybrio™ process moves along the joint, performing the weld. These systems can achieve single-side, full-penetration butt welds up to 12.5 mm (1/2 in.) in thickness in a single pass and thicker with subsequent passes.

Hybrio™ Tube

Hybrio™ Tube hybrid laser tube and pipe systems are longitudinal seam welding systems designed to press the material together at the weld joint to achieve the fit up needed for HLAW welding. The part is then drawn through the machine to perform the weld. These systems can produce straight or tapered tubes and pipes up to 1 m (3 ft.) in diameter and with wall thicknesses up to 12.5 mm (1/2 in.).

Hybrio™ Orbit

The Hybrio™ Orbit hybrid laser pipe girth welding system is specially designed for welding full pipe girths as well as for rapidly producing high-quality root passes for subsequent processing with traditional high-deposition processes. These are fully orbital welding systems, capable of 360 degree continuous welds around cylindrical products with very low clearances. The Hybrio™ Orbit system was specifically developed for the oil and gas industry, but has applications in many other industry segments.

Hybrio™ Process Package for Integrators

ESAB's Hybrio™ hybrid laser arc welding process technology leads the industry in ease of use and process robustness. ESAB has developed a fifth-generation welding system that is capable of sensing its environment, the joint location and fit-up and then adapting the process in real-time to maintain high weld quality over a wide range of fit-up conditions. ESAB has built this technology into a complete process package that is available not only as part of our turnkey hybrid welding systems but also to machine tool OEM and system integrators. ESAB provides the hybrid welding expertise along with the support of our Laser Process Centers in North America and Europe, to minimize the technical risk to our OEM and integration partners worldwide.

HNG Multi

Narrow Gap Welding System

- Designed for both Single (AC or DC) and tandem (DC/AC or AC/AC) wire welding in parallel or almost parallel joints, ranging in width from 18 mm (0.71 in.) and in depth down to 350 mm (13.8 in.).
- Continuous double-sided joint tracking gives a high reliability at shift overlap.
- Continuous measuring of joint width
- Short-circuit protected, welding head - workpiece.
- Automatic positioning.
- Possible to weld up to 50 mm (1.97 in.) joint width
- Air-cooled torch
- Reliable and uniform high weld quality
- High productivity.
- Minimum of supplementary work.

Beam Welding - Pull Through Welders

For welding of beams and profiles

- ESAB offers a complete and effective way of welding beams and profiles. Whether you weld I-, T- or L-beams, wide flange beams, columns, tapered beams or non-symmetrical beams, ESAB has the expertise and welding equipment to match your efficiency, quality, precision, versatility, productivity, and overall welding economy requirements.
- Two types of machines: IT-machines where the beams are welded with the web unit in the vertical position, and I-machines, where the beams are produced in horizontal position.
- High production capacity and perfect weld quality.
- The welding operation takes place when the flange and the web are pressed together under pressure in order completely to eliminate the gap between the surfaces.

Straightening principle:

Beam welder IT-258

Total range of beam sizes that can be welded:

Machine type	Web	Flange
IT-258	200-2500 mm	100-800 mm
IT-158	200-1500 mm	100-800 mm

Examples of beams than can be welded:

Welding solutions for Pipemills

Our experience and knowledge - your benefit!

Flexible, reliable welding equipment

A wide range of products developed in-house for various multi-wire SAW applications which are particularly suitable for pipe welding.

Precise, high-speed longitudinal welding

Our concept for longitudinal submerged-arc welding is suitable for pipes in a normal diameter range of 20-64", a normal wall thickness of 6-40 mm (0.24-1.57 in.) and a length of up to 18 m (708.66 in.).

Internal and external welding

For internal welding we have designed pre-stressed booms as well as welding heads for up to four wires.

The external welding station is based on a column and boom solution with a very stable cross-slide to adapt to different pipe diameters.

Return current systems (grounding)

High current circuits have to be closed back to the power source by efficient systems at constantly moving pipes. Flexible steel brushes in two rows in front and behind the welding process are pressed with defined force from outside to the pipe to catch the current with a minimum of voltage loss and to surely avoid any arc blow effect, which would disturb the weld process.

Problem-free flux and wire feed systems

Smooth feeding of wire in different diameters and equally straight-forward supply of new and re-used flux.

The correct combination of compressed air, flux feeding, easy replenishment of new flux via the Big/Bag system, a vacuum unit, a reliable magnetic separator and continuous recovery helps to create welding stations with less downtime, high-quality welds and a cleaner working environment.

Spiral pipe welding

Internal and external welding is performed at one and the same station. Internal welding starts first and, after half a turn, external welding then begins - internally with two or in some cases three wires and externally with one or three wires in the welding process, depending on the diameter and wall thickness of the pipe.

Windmill Tower Manufacturing

Dedicated solutions for dedicated manufacturers

- The key to efficient production of wind towers is smooth component flow in the workshop. The benefit of a high deposition welding process is completely lost if the set-up or handling of components in any area of the process fails or takes an unacceptable amount of time.
- ESAB can assist with the welding and cutting process in wind tower production and deliver finely tuned solutions for each step in the production process.
- With a complete package from ESAB, you only need to work with one supplier for product, service and support. This results in a large project being organized efficiently, with a fixed cost and agreed time schedule. Smooth production flow is part of the complete delivery.

Oxy-fuel or plasma cutting of plate and seam preparation

Rolling, forming and tack welding of the shell

External longitudinal submerged-arc welding using a column and boom

Internal longitudinal submerged-arc welding using a column and boom

Submerged-arc welding of flanges and supports

Joining of shell sections using roller beds with hydraulic fit-up system. Internal and external submerged-arc welding performed by a column and boom station.

Automatic welding of the door frame.

Production of sub-components using an ESAB positioner and manual welding equipment

ESAB Retrofit

Modernization and upgrading

- ESAB's service group can upgrade any brand of existing equipment to virtually new condition, with the latest process equipment and accessories.
- Accessories include seam trackers, flux recovery systems, wire handling equipment, strip cladding equipment - all can be added to existing equipment.
- Material quality, thickness and required properties will decide the most suitable welding process. Over a time these conditions will change which might lead to a change of process. ESAB can offer a variety of different welding heads for different processes to be fitted on any carrier.
- ESAB Retrofit is an ideal alternative to investment in new equipment. Not least when it comes to the added values that frequently accompany this kind of upgrade.
- In addition to increased availability, a conversion of this kind frequently also leads to a substantial rise in productivity and quality, not to mention improvements to the working environment.
- ESAB works with many OEM's for equipment - specify the ESAB process system and accessories and get the advantage of ESAB performance from your existing supplier of machinery.

Why Retrofit?

- It is difficult to find parts for your old equipment
- The productivity is too low with your present equipment
- The quality of the process is unacceptable
- The process is not ideal for the present production

Time to Retrofit?

What kind of carrier can be retrofitted?

- ESAB can retrofit manipulators, gantries, seamers, shipyard panel lines etc. We even retrofit flash butt welding machines to a new life.
- Integration of welding equipment to new carriers or production lines produced by integrators of automation equipment for example pipemills, panel lines etc.
- We do small retrofits by just replacing the existing equipment and we do large integrated solutions.

World leader in welding and cutting technology and systems

ESAB operates at the forefront of welding and cutting technology. Over one hundred years of continuous improvement in products and processes enables us to meet the challenges of technological advance in every sector in which ESAB operates.

Quality and environment standards

Quality, the environment and safety are three key areas of focus. ESAB is one of few international companies to have obtained the ISO 14001 and OHSAS 18001 standards in

Environmental, Health & Safety Management Systems across all our global manufacturing facilities.

At ESAB, quality is an ongoing process that is at the heart of all our production processes and facilities worldwide. Multinational manufacturing, local representation and an international network of independent distributors brings the benefits of ESAB quality and unrivalled expertise in materials and processes within reach of all our customers, wherever they are located.

ESAB Sales and Support offices worldwide

* Includes manufacturing facilities of ESAB North America. A wholly owned subsidiary of Anderson Group Inc.
